EDEN LAND CARE FARMING PROJECT(ELCF

For this special report to work, there must be information to be added as described below;

New sub menu menu will be added under project menu called ELCF. Sub menu will have option to upload two types of data;
1. Forms
2. Farmers.

I recommend the option of vertical tabs provided by the template to be used in this case.

Forms shall be uploaded for fields officers to access and download them through their accounts (after being given the permissions). These forms will be empty since they will be disseminated to the farmers.

Farmers section, shall be uploaded with information of a particular farmer. Before uploading the filled forms the system will begin by providing a simple registration form of the following fields;
1. Full names
2. Age
3. Gender
4. Farm no
5. Mobile no
6. Village name
7. Ward name
8. District
9. Region

After those information, the system will have an option for one to upload filled forms (on PDF format). Note that this option can be continuously therefore should be separated from the registration form above. Furthermore the option to add each form should have the following; Tittle, and file upload.

Report: It will be called elcf report, that will allow any one with permission to view it. The report part, will have a search name option, where by one will search for a farmer record. It will have the part of introduction (farmer details) and then forms (uploaded forms with their tittles). The forms can be opened by PDF view or downloaded.
